

Exploratory Testing Plan

Athziri Vega, Carter Ward, Jeremy Martel, Logan Foster

#1. Year of School entry field

- Purpose: Check to see if non number inputs cause problems
- Test steps & inputs: enter numbers, letters, symbols, spaces
 - Expected results: Since our current version is not complex should just save whatever is inputted
- Potential issues: In a more finished version anything not a number would probably cause issues with symbols potentially causing bigger issues depending on how the information is displayed and stored. Would be easy to solve by making the field on able to accept numbers 1-4 (or higher if appropriate)

#2.KPI Tiles

- Purpose: To view delta vs. prior period with directional indicator on tiles on dashboard
- Formula: Confirm data on tiles[Students Monitored, At-Risk Students, Avg Engagement Score, Sharp Declines/Week] is correct and discover the amount and changes in the number
- Test steps & inputs: input student information in respected tabs, go to main overview and interact with KPI tiles to make sure data displayed is estimated properly
 - Expected results: Correct estimated data on tiles
- Potential issues: The information is incorrect or it's cutting out data

#3. Student Detail View

- Charter: Explore the Student Detail view using students with different levels of data (full profile, zero activity, no survey response) to see how the screen handles missing or empty information
- Test steps & inputs:
 - 1. Click "View" on the student profile from the At-Risk panel
 - 2. Check all engagement activity fields (clubs, events, dining, rec center, etc.)
 - 3. Check all student profile fields (year, major, housing, etc.)
 - 4. Check engagement score badge, survey results, and suggested clubs panel
 - 5. Open a student with zero activity and one with no survey response
 - Expected results: All fields show a value of "0"; score badge matches at-risk list; missing survey shows placeholder (no crash); suggested clubs populated based on profile
- Potential issues: Zero-activity fields may be empty; suggested clubs may fail for undeclared majors; survey panel may break with no response on file

#4. Surveys

- Purpose: View student feedback and program requests. Can possibly lead to direct student contact/referrals
- Test steps & inputs: On sidebar, select surveys to view gathered information. View content of feedback to make sure system doesn't overload
 - Expected results: Collect student surveys based on events/engagement
- Potential issues: surveys not accessible

#5. First-Generation Filter Field

- Purpose: Explore the First-Generation input field with various entry types to see how the field handles expected and unexpected inputs
- Test steps & inputs:
 - 1. Enter a valid value (e.g., "Yes")
 - 2. Enter multiple comma-separated values (e.g., "Yes, No")
 - 3. Enter a number, symbol, or blank spaces
 - 4. Enter a very long string
 - 5. Leave blank and apply filters
 - Expected results: Valid values filter the student list correctly; comma-separated entries are parsed and not treated as one string; invalid inputs are rejected or handled; blank fields do not break the filter
- Potential issues: Comma-separated values may be treated a single string; invalid inputs may silently apply and return wrong results; blank submissions may crash the filter or return all students unfiltered

Bonus Activity

- Include special characters to see if they are supported
- Include numbers to see if they are supported
- Include spaces to see if it causes an error
- Enter with a blank field to see if it accepts it
- Enter under or over the 30-character limit to see if the field accepts it
- Include letters from non-English languages
- Confirm pasted input behaves the same as typed input
- Confirm emojis are blocked or handled without breaking the field
- Confirm input is saved when refreshing the page

Bonus Activity (Cont.)

- Confirm the field doesn't block duplicate entries that are valid
- Click submit multiple times quickly to see if it creates duplicate records
