*Title*

IT System Administrator

## *Job Responsibilities*

Manage servers, networks, and operating systems while administering user access and security policies. Monitor infrastructure, perform backups, and troubleshoot issues to ensure system availability and business continuity.

## *Goals*

Maintain stable, secure, and high-performing IT infrastructure with minimal downtime. Automate repetitive tasks to improve efficiency and stay ahead of security threats and compliance requirements.

## *Challenges*

Balancing day-to-day break-fix demands with longer-term infrastructure improvements. Managing growing complexity across on-premises and cloud environments with limited budget and staffing.

### *Decision Criteria*

Reliability, ease of integration with existing systems, vendor support quality, and total cost of ownership. Prefers solutions with straightforward documentation and minimal disruption to operations during deployment.

### *Perceived Barriers*

Budget constraints and the need for executive buy-in on new tools or upgrades. Concern over migration risk, learning curves for the team, and compatibility with legacy systems.
