

CARTER WARD

Birmingham, AL | (205) 308-3443 | carterw6515@yahoo.com | linkedin.com/in/carterward2004 | github.com/CSW04-exe

PROFESSIONAL SUMMARY

Computer science graduate with an AI and Data Science concentration and experience spanning software development, data analytics, machine learning, technical writing, and cross-functional collaboration. Through internships and academic projects, developed applications, analyzed large datasets, and translated complex technical concepts into practical solutions for diverse audiences. Brings a strong analytical mindset, adaptability, and a collaborative approach to solving technical and business challenges. Able to obtain and maintain a security clearance and open to relocation.

EDUCATION

B.S. Computer Science with AI & Data Science Concentration

University of Alabama in Huntsville

May 2026
Huntsville, AL

- GPA: 3.6/4.0 (Cum Laude)
- Honors College Member
- Student Government Association Senator

WORK EXPERIENCE

People & Culture Success Intern

May 2026 – July 2026

Evisions

Remote

- Collaborated with an intern cohort spanning 7 departments to deliver 15+ go-to-market assets for the program's capstone presentation.
- Built buyer personas, an SLA framework, and a financial forecast informing the cohort's go-to-market strategy.
- Conceived and pitched the Social Engagement Accelerator, a dashboard prototype for flagging at-risk students, as the final deliverable.

Student Specialist IV

January 2026 – April 2026

UAH College of Business

Huntsville, AL

- Interviewed and profiled 5 honorees for the "Top 20 of 2026" magazine, capturing each subject's achievements and personality.
- Crafted AP-style feature stories translating interview material into polished, publication-ready narratives.
- Led peer-review sprints with a 4-person editorial team, refining tone, consistency, and accuracy across all 20 published profiles before release.

Technical Writer Intern

January 2025 – May 2025

Book Systems, Inc.

Huntsville, AL

- Reengineered technical manuals for 3 product lines (Atrium, Librista, Booktracks) under guidance from the writing team.
- Restructured legacy content into task-oriented user guides, standardizing terminology and layout across all 3 titles.
- Produced 9-10 manual revisions per sprint across 5 months, improving usability and brand cohesion.

Brewista

May 2024 – October 2025

7 Brew Coffee

Huntsville, AL

- Operated the Touchpoint POS system for orders, payments, and rewards during high-volume peak rushes.
- Sustained under-5-minute order-to-drink times through coordinated teamwork with fellow brewistas.
- Drove a 10-15% sales increase by promoting limited-time offers and loyalty deals.

PROJECT EXPERIENCE

Digital Portfolio

July 2026

Evisions

Remote

- Consolidated deliverables from 7 weekly department rotations (product, engineering, marketing, support, etc.) into a single cohesive portfolio site.
- Developed a multi-page static site in HTML, CSS, and vanilla JavaScript with SEO metadata and accessible navigation, using Claude Code to accelerate coding and content cleanup.
- Deployed the site to GitHub Pages with automated CI link-checking through GitHub Actions.

Airline Load Factor & Airfare Analysis

March 2026 – April 2026

UAH Department of Computer Science

Huntsville, AL

- Analyzed whether airline load factor predicts average airfare using unfiltered, multi-source U.S. aviation records instead of a clean toy dataset, as part of a 4-person team's big-data analytics project.
- Engineered a chunked Python ETL pipeline with pandas and NumPy to merge 5 government and industry datasets (approximately 3.7 million rows) into a unified analysis table.
- Evaluated correlation, linear regression, and PCA regression models in scikit-learn, reaching 78.4% accuracy and predicting mean fare within \$6 of actual fare on held-out test data.

Pirate Simulator

January 2026 – May 2026

UAH Department of Computer Science

Huntsville, AL

- Partnered with a 4-person team to build a maritime piracy simulation tool modeling interactions between pirate, merchant, and naval vessels across real-world piracy-prone regions, as a senior capstone software engineering project.
- Delivered UI-focused features for the React and Leaflet frontend, including ocean-current visualization and encounter tracking with coordinate persistence.
- Resolved a runtime crash caused by a missing component import, and added a confirmation safeguard to prevent accidental data loss from an unconfirmed delete action.

ANN vs. SVM on the Adult Census Income Dataset

December 2025

UAH Department of Computer Science

Huntsville, AL

- Trained binary income classifiers from scratch with 1 teammate to predict whether an individual earns above or below \$50K per year from 14 census attributes for a machine learning course project.

- Constructed an artificial neural network and a linear support vector machine from scratch in NumPy, hand-deriving backpropagation and hinge-loss gradient descent.
- Achieved 81.4% accuracy with the neural network, 1.5 percentage points above the SVM's 80.0%, while analyzing the precision-recall tradeoff under class imbalance.

Priority Process Scheduler
UAH Department of Computer Science

November 2025
Huntsville, AL

- Designed a multithreaded priority-based CPU scheduler in Java for an operating systems course project, solving a classic producer-consumer problem across multiple concurrent worker threads.
- Built a custom binary min-heap priority queue and synchronized locking mechanism with a graceful shutdown sequence.
- Verified correct real-time-then-priority-then-arrival ordering with 0 dropped processes across 5 concurrent workers.

Matrix Calculator
UAH Department of Computer Science

January 2025 – April 2025
Huntsville, AL

- Contributed to a 3-person team building a Java matrix calculator with a graphical interface for an object-oriented programming course project, replacing a command-line-only prototype so users could input and visualize linear algebra operations directly.
- Authored portions of the Swing-based GUI and computation engine supporting 8 matrix operations, including inversion, determinant, and eigenvalue calculations, integrating the Apache Commons Math library for the underlying numerical processing.
- Validated numerical output against known solutions across all 8 operations, catching rounding-precision discrepancies in the eigenvalue module before final submission.

SKILLS

Programming Languages: C#, C++, Java, JavaScript, Python

Frameworks & Libraries: Apache Commons Math, Leaflet, NumPy, Pandas, React, Scikit-Learn

Development Tools & Platforms: Claude Code, Docker, GitHub (Actions, Pages), NetBeans, Unity, VS Code

Productivity & Office Tools: Adobe Acrobat, Canva, Microsoft Office, Miro

Core Competencies: Data Engineering & ETL Pipelines, Machine Learning & Statistical Modeling, Technical Writing & Documentation, Debugging & Validation, Cross-Functional Collaboration, Business & Financial Analysis

CERTIFICATIONS

Argos Training Certificate
Evisions

June 2026

AI Fluency Framework & Foundations
Anthropic

May 2026
