UAH Streamlines Campus Reporting with Evisions Argos

Highlights

1. Confirmed Argos user with a formal OIT-managed access and data block request process
2. Banner-connected reporting environment serving 8 colleges and 115 degree programs across enrollment, finance, HR, and student records
3. Self-service reporting model reduces IT dependency and eliminates departmental data silos

Challenge

UAH's institutional data was spread across multiple Banner-connected systems with no unified reporting environment. IT staff were fielding routine data requests on behalf of faculty and staff across all 8 colleges, which created reporting inconsistencies, version-control headaches, and turnaround delays that grew harder to manage as UAH's enrollment and research portfolio expanded

Solution

UAH's Office of Information Technology brought in Evisions Argos as its enterprise reporting platform, connecting it directly to Banner and setting up a governed data block request and sign-off process. Department-level designers were trained to build and maintain their own reports, and pre-built Banner DataBlocks gave the institution immediate coverage for standard admissions, enrollment, financial aid, finance, and HR reporting needs

Results

Faculty and staff across UAH's 8 colleges gained self-service access to institutional data without needing to route requests through IT. Reporting became more consistent across departments, version conflicts dropped, and IT was able to redirect its attention toward higher-value infrastructure and governance work

Stats

School Name: University of Alabama in Huntsville (UAH)

Main Location: Huntsville, AL

Type: Public, 4-year research university

Campuses: 1 (505-acre main campus)

Students: 8,362

Faculty/Staff: 17:1 student-to-faculty ratio

Undergraduate Programs: 115 total degree programs

Founded: 1950
