Support SLA

- **Service and Support**
 - Submitted through a dedicated SEA Support Portal, separate from the general Evisions helpdesk
 - Monitored Monday through Friday, 6:00 AM to 6:00 PM CT
 - All requests must include institution name, affected feature area, and expected versus actual behavior
 - A named support contact assigned to each account within 5 business days of contract signing
- **Response Priority Tiers**
 - **Critical:** Dashboard inaccessible or scores not calculating institution-wide. Response within 2 hours, 7 days a week
 - **Significant:** Core feature broken but platform accessible. Response within 4 business hours
 - **Moderate:** Data displaying incorrectly, filter returning inconsistent results. Response within 2 business days
 - **Informational:** Navigation questions, feature clarification, non-urgent configuration. Response within 4 business days
- **Platform Availability and Integrations**
 - 99.7% monthly uptime guaranteed; clients receive a 5% billing credit per full percentage point below the threshold due to an Evisions-side failure
 - Planned maintenance scheduled weekends between 11:00 PM and 3:00 AM CT with 5 business days advance notice
 - Evisions monitors all managed integration pipelines and notifies clients within 3 business hours of a detected sync failure
 - Clients receive a monthly integration health report covering sync success rates, data latency, and incidents
 - Failures originating in the institution's own campus systems are outside scope

Support SLA (Cont.)

- **Support Inclusions and Exclusions**

- **Included:** engagement score errors, at-risk flagging and filter logic, events and club meeting data, referral workflows, and onboarding support within the first 90 days post-implementation
- **Excluded:** data accuracy issues from third party systems, custom scoring changes post-implementation, FERPA disputes, staff training on data interpretation, and any platform modifications made without Evisions' written approval

- **Version Support and Client Responsibilities**

- Current release and one prior minor version supported; quarterly minor releases, one major release per academic year before fall semester
- 60 days advance notice before any version moves to unsupported; clients on unsupported versions are ineligible for Critical and Significant tier response
- Client must maintain active integrations, notify Evisions 15 business days before any upstream system changes, and designate at least one internal SEA administrator
- Extended coverage available at 12% of annual license fee for weekend Critical and Significant tier response

Troubleshooting & Escalation Process

- **Step 1: Intake and Triage**
 - Confirm request includes institution name, affected feature area, and expected versus actual behavior before beginning
 - Assign priority tier (Critical, Significant, Moderate, Informational), start the response clock, and log in the SEA Support Portal
- **Step 2: Analyst Troubleshooting**
 - **Engagement Scores:** Confirm last sync for all integrations, check if issue is institution-wide or isolated, verify filters are not skewing averages, confirm nightly recalculation job completed
 - **At-Risk List:** Verify no unintended filters are stacked, confirm threshold configuration is active, search for missing students directly
 - **Events:** Check Date and Reserved filters, confirm event is published and active in the source system, verify last sync timestamp
- **Step 3: Escalation Paths**
 - **Tier 1: Senior Support Analyst** → Analyst completed all checks, root cause still unknown; hand off full notes, steps taken, and screenshots
 - **Tier 2: Data Engineering** → Suspected pipeline failure or sync error; hand off integration health data, sync timestamps, and affected data source
 - **Tier 3: Software Engineering** → Confirmed platform bug or regression; hand off reproducible steps, SEA version, and a drafted Jira ticket
 - **Tier 4: Product** → Issue reveals a product gap or missing feature; hand off client use case summary and frequency across the client base
- **Step 4: Client Communication and Closure**
 - Acknowledge every ticket within the SLA window; send daily status updates while open; never commit to a resolution timeline without engineering confirmation
 - Close only after client confirms resolution or after 5 business days of no response; log root cause, resolution steps, and escalation path before closing

Pricing & Licensing Model

- Basic version would be a licensed model, yearly with a discount for signing up for more than 1 year.
- Basic/certain amount of time support included in any version.
- Advanced/longer required support might be charged, would be dependent on the need shown and work required.
- Bundle with other Evisions products likely, especially if applications can work together.
- Different prices for school size possible, would depend on if larger schools would take a notably larger amount of resources to support on our end.
- Paid virtual trainings available later after employees were comfortable enough to be able to train in the application, and any potential major issues had been ironed out.
